

Butterflies of British Columbia

(Source: Guppy and Shepard 2001)

This checklist of the butterflies and skippers of British Columbia includes all known species and subspecies through 2000. The list includes hypothetical species and subspecies that may eventually be found in the province, indicated by a single asterisk (*). It also includes species and subspecies known from adjacent areas which are shown on the distribution maps but are not expected to occur in the province; these are indicated by a double asterisk (**). For these latter species new synonyms are listed in the checklist because the species are not discussed in the text. Otherwise new synonyms are listed in the text.
